UNIVERSITY OF CALCUTTA

Notification No. CSR/ 12 /18

It is notified for information of all concerned that the Syndicate in its meeting held on 28.05.2018 (vide Item No.14) approved the Syllabi of different subjects in Undergraduate Honours / General / Major courses of studies (CBCS) under this University, as laid down in the accompanying pamphlet:

List of the subjects

SEMESTER – I

CMS-A-CC-1-1-TH: Digital Logic
Core Course-1: Theory: 04 Credits: 60 hours

Integrated Circuits: (5 hours)
Bipolar Logic Families: DTL, TTL NOT Gate, TTL NAND Gate, TTL NOR Gate, Open Collector, Fan-in, Fan-out; MOS Logic Families: NMOS, PMOS, CMOS, SSI, MSI, LSI and VLSI classification

Number Systems: (5 hours)
Weighted and Non-Weighted Codes, positional, Binary, Octal, Hexadecimal, Binary coded Decimal (BCD), Gray Codes, Alphanumeric codes, ASCII, EBCDIC, Conversion of bases, Parity bits, Single Error bit detection and correcting codes: Hamming Codes, Fixed and Floating Point Arithmetic: Addition, Subtraction, Multiplication and Division.

Boolean Algebra: (8 hours)
Fundamentals of Boolean Expression: Definition of Switching Algebra, Basic properties of Switching Algebra, Huntington's Postulates, Basic logic gates (AND, OR, NOT), De-Morgan's Theorem, Universal Logic gates (NAND, NOR), Minterm, Maxterm, Minimization of Boolean Functions using K-Map up-to four variables, Two level and multilevel implementation using logic gates, Simplification of logic expression.

Combinational Circuits: (20 hours)
Half adders, Full Adder (3-bit), Half Subtractor, Full Subtractor (3-bit) and construction using Basic Logic Gates (OR, AND, NOT) and Universal Logic Gates (NAND & NOR), Multibit Adder- Ripple Carry Adder, Carry Look Ahead adder, BCD Adder, 1'S & 2'S Complement Adder/Subtractor unit Construction using 4 bit Full adders units, 1 bit, 2 bit, 3 bit and 4 bit Comparators using basic logic gates.
Data Selector-Multiplexer: Expansion (Cascading), Reduction, Function Realization, Universal function realization, Multifunction Realization.
Encoders: - Realization of simple Encoders and priority Encoders using Basic and Universal Logic gates
Data Distributor: - De-multiplexer, Cascading.
Chip Selector/Minterm Generator - Decoder- Function Realization, Cascading, BCD Decoders, Seven Segment Display and Decoders, realization of seven segment decoders using basic gates.

**Sequential Circuits:** (22 hours)
Registers: Serial Input Serial Output, Serial Input Parallel Output, Parallel input Serial Output, Parallel Input parallel Output, Universal Shift Registers.
Synchronous Counter: UP/DOWN Counters, Mod-N Counters, Ring Counters, Johnson Counters.

**CMS-A-CC-1-1-P: Digital Circuits**
Core Course-1: Practical: 02 Credits: 40 hours

**Combinational Circuits:**

1. Implementation of different functions using Basic and Logic gates, SOP, POS
2. Study and prove De-Morgan’s Theorem.
3. Universal function using NAND and NOR gates
4. Implementation of half and Full adder (3-bit) using basic logic gates and Universal logic gates (NAND & NOR).
5. Implementation of half and Full Subtractor (3-bit) using basic logic gates and Universal logic gates (NAND & NOR).
6. 1 Digit BCD adder using 7483 and other logic gates.
7. Design 4 to 1 multiplexer using logic/Universal gates and implement full adder/full subtractor.
8. Using 74153 and 74151 to implement full adder/full subtractor and other functions.
10. Design 2 to 4 decoder using basic / universal logic gates.
11. Study 74138 and 74139 and implement full adder/ full subtractor and other functions.
12. Implementation of 1 bit Comparator using decoders.
13. Cascading of Decoders.
14. Design a parity generator and checker using basic gates.
15. Construct and study comparators using 7485.
16. Construct Comparator (2-bit) using logic gates
17. Design a seven segment display unit using Common anode/Common cathode and 7447 / 7448.

**Sequential Circuits:**

1. Realization of RS, D, JK Clocked/Gated Level Triggered Flip-Flop using basic/Universal logic
Study and Conversion of Flip-Flops: D to JK, JK to D, JK to T, SR to JK, SR to D Flip-flop.
3. Design synchronous and asynchronous counters MOD-n (MOD-8, MOD-10) UP/DOWN and connecting Seven Segment Display along with decoder for display of counting sequence.
5. 4-bit binary arbitrary sequence synchronous counter.

Text/Reference Books
2. Digital Systems - Principle & Applications, Tocci & Widmer, EEE.
5. Digital Design, Mano, PHI.
7. Digital Circuits and Design, Salivahan, Vikas

Core Course-2: Theory: 04 Credits: 60 hours

Introduction: (4 hours)
History, Basic Structure, Algorithms, Structured programming constructs.

C Programming elements: (8 hours)
Character sets, Keywords, Constants, Variables, Data Types, Operators- Arithmetic, Relational, Logical and Assignment; Increment and Decrement and Conditional, Operator Precedence and Associations; Expressions, type casting. Comments, Functions, Storage Classes, Bit manipulation, Input and output.

C Preprocessor: (6 hours)
File inclusion, Macro substitution.

Statements: (6 hours)
Assignment, Control statements- if, if else, switch, break, continue, goto, Loops-while, do_while, for.

Functions: (6 hours)
Argument passing, return statement, return values and their types, recursion

Arrays: (7 hours)
String handling with arrays, String handling functions.

Pointers: (10 hours)
Definition and initialization, Pointer arithmetic, Pointers and arrays, String functions and manipulation, Dynamic storage allocation.
User defined Data types: (7 hours)
Enumerated data types, Structures. Structure arrays, Pointers to Functions and Structures, Unions

File Access: (6 hours)
Opening, Closing, I/O operations.

CMS-A-CC-1-2-P: Programming with C
Core Course-2: Practical: 02 Credits: 40 hours

1. WAP to print the sum and product of digits of an integer.
2. WAP to reverse a number.
3. WAP to compute the sum of the first n terms of the following series, \( S = 1 + \frac{1}{2} + \frac{1}{3} + \frac{1}{4} + \ldots \)
4. WAP to compute the sum of the first n terms of the following series, \( S = 1 - 2 + 3 - 4 + 5 \ldots \)
5. Write a function that checks whether a given string is Palindrome or not. Use this function to find whether the string entered by user is Palindrome or not.
6. Write a function to find whether a given no. is prime or not. Use the same to generate the prime numbers less than 100.
7. WAP to compute the factors of a given number.
8. Write a macro that swaps two numbers. WAP to use it.
9. WAP to print a triangle of stars as follows (take number of lines from user):
   
   *
   ***
   *****
   ******
   *********

10. WAP to perform following actions on an array entered by the user:
   i) Print the even-valued elements
   ii) Print the odd-valued elements
   iii) Calculate and print the sum and average of the elements of array
   iv) Print the maximum and minimum element of array
   v) Remove the duplicates from the array
   vi) Print the array in reverse order
   The program should present a menu to the user and ask for one of the options. The menu should also include options to re-enter array and to quit the program.

11. WAP that prints a table indicating the number of occurrences of each alphabet in the text entered as command line arguments.
12. Write a program that swaps two numbers using pointers.
13. Write a program in which a function is passed address of two variables and then alter its contents.
14. Write a program which takes the radius of a circle as input from the user, passes it to
another function that computes the area and the circumference of the circle and displays the value of area and circumference from the main() function.

15. Write a program to find sum of n elements entered by the user. To write this program, allocate memory dynamically using malloc() / calloc() functions or new operator.

16. Write a menu driven program to perform following operations on strings:
   a) Show address of each character in string
   b) Concatenate two strings without using strcat function.
   c) Concatenate two strings using strcat function.
   d) Compare two strings
   e) Calculate length of the string (use pointers)
   f) Convert all lowercase characters to uppercase
   g) Convert all uppercase characters to lowercase
   h) Calculate number of vowels
   i) Reverse the string

17. Given two ordered arrays of integers, write a program to merge the two-arrays to get an ordered array.

18. WAP to display Fibonacci series (i) using recursion, (ii) using iteration.

19. WAP to calculate Factorial of a number (i) using recursion, (ii) using iteration.

20. WAP to calculate GCD of two numbers (i) with recursion (ii) without recursion.

21. Create Matrix class using templates. Write a menu-driven program to perform following Matrix operations (2-D array implementation):
   a) Sum    b) Difference    c) Product    d) Transpose

22. Copy the contents of one text file to another file, after removing all whitespaces.

23. Write a function that reverses the elements of an array in place. The function must accept only one pointer value and return void.

24. Write a program that will read 10 integers from user and store them in an array. Implement array using pointers. The program will print the array elements in ascending and descending order.

These are only examples, more can be included related to the theory.

Use open source C compiler.

SEMESTER – II

Core Course-3: Theory: 04 Credits: 60 hours

Basic Structure of Computers (Qualitative Discussion)
Computer Types, Basic Functional Units, Basic Operational Concept, Bus Structure, Software, Performance, Multiprocessor and Multicomputer, IAS Computer, Historical perspectives. (05 hours)

Register Transfer and Micro-operation
Register Transfer Language, Register Transfer, Bus and Memory Transfers, Three State Bus Buffers, memory Transfer, Arithmetic and Logical micro-operations, Shift and Arithmetic shifts. (05 hours)

Basic Computer Organization and Design
Instruction Codes, Stored Program Organization, Indirect Address, Computer Registers, Common Bus System, Computer Instruction, Timing and Control, Instruction Cycle, fetch Decode, Register Reference Instructions, Memory Reference Instruction, Input-Output and Interrupt, Design of Basic Computer, Design of Accumulator Logic. (05 hours)

CPU Organization
Arithmetic and Logic Unit (ALU)- Combinational ALU, 2’S Complement Addition, Subtraction Unit, Booths Algorithm for Multiplication, Division Hardware using Restoration Division Algorithm. (06 hours)

General register organization, Control Word, Accumulator Based, Register Based, Stack Type CPU organization.

Control Unit
Hardwired Control Unit, Micro-programmed Control Unit: Control memory, Address Sequencing, conditional branching, mapping of instructions, subroutine, Design of Control Unit. (07 hours)

CPU Registers
Program Counter, Stack Pointer Register, Memory Address Register, Instruction Register, (06 hours)
Memory Buffer Register, Flag registers, Temporary Registers.  

**Instructions.**  
Operational Code, Operands, Zero, One, Two and Three Address Instruction, Instruction Types, Addressing modes, Data Transfer and Manipulation instructions, Program control instructions.  

**CISC and RISC processors**  
Introduction, relative merits and De-merits.  

**Input / Output Organization**  
Polling, Interrupts, subroutines, Memory mapped IO, IO mapped IO, DMA, I/O Bus and Protocol, SCSI, PCI, USB, Bus Arbitration.  

**Computer Peripherals**  
VDU, Keyboard, Mouse, Printer, Scanner (Qualitative approach).  

**Memory**  
(Primary memory: ROM, PROM, EPROM, EEPROM, Flash memory, RAM: SRAM, DRAM, Asynchronous DRAMs, Synchronous DRAMs, Structure of Larger Memories, RAMBUS Memory, Cache Memory: Mapping Functions, Replacement Algorithms, interleaving, Hit and Rate penalty, Virtual memories, Address Translation, Memory Management requirements, Secondary Storage: Magnetic Hard Disks, Optical Disks, Magnetic Tape Systems.

---

**CMS-A-CC-2-3-P: Computer Organization Lab.**  
**Core Course-3: Practical:** 02 Credits: 40 hours  
(1). Construct an Arithmetic Unit capable of performing 4-bit subtraction and Addition using 2's complement method. Use Parallel Adders and other necessary logic gates.  
(2). Construct a logical Unit using logic gates capable of performing 4-bit, Bitwise ORing, ANDing, XORing and inversion.  
(3). Construct an 4-bit ALU unit which can perform the following operation;  

<table>
<thead>
<tr>
<th>Selection</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>S1  S0</td>
<td></td>
</tr>
<tr>
<td>0  0</td>
<td>Addition</td>
</tr>
<tr>
<td>0  1</td>
<td>Subtraction</td>
</tr>
<tr>
<td>1  0</td>
<td>XOR-ing</td>
</tr>
<tr>
<td>1  1</td>
<td>Complement</td>
</tr>
</tbody>
</table>

(4). Construct a 2-bit Carry Look Ahead Adder using logic gates.  
(5). Study and Construct a 1-digit BCD/Decimal adder using parallel adders and other necessary logic gates.  
(6). Construct a Binary Multiplier using basic logic gates.
(7). Construct a Binary Divider using basic logic gates.
(8). Subtraction with 1's complement method using parallel adders and other necessary logic gates.
(9). Construction of BCD Subtractor with 9'S complement method using parallel adders and logic gates.
(10). Construction of BCD Subtractor with 10'S complement method using parallel adders and logic gates.
(11). Binary magnitude comparators (up to 4 bits) using parallel adder and logic gates.
(12). Construct a Binary 4-bit and 8-bit adder using logic gates.
(13). Construct a Serial in Serial out 4-Bit register.
(14). Construct a 4-Bit Universal Shift register.
(15). Construct a 4 bit ring counter.
(16). Construct a 4 - Bit Johnson Counter.
(17). Construct RAM (4-bit) and extend it
(18). Horizontal and Vertical Cascading of Memory modules.

Text/Reference Books

CMS-A-CC-2-4-TH: Basic Electronic Devices and Circuits
Core Course-4: Theory: 04 Credits: 60 hours

Basics of Circuit Theory: (04 hours)
KVL, KCL, Thevenin's, Norton's, Superposition, Maximum Power Transfer Theorem. Application to simple problems.

Theory of Semiconductor devices: (03 hours)
Semiconductor materials and their properties, classification based on energy band diagram, Intrinsic and extrinsic semiconductors, P & N type.

Diode and its applications: (09 hours)
Working Principle, construction and characteristics of PN junction diode, biasing, depletion region, Single Phase Half, Full wave and bridge rectifier using PN Junction diode, Circuit, Working principle, Calculation of Average DC current and Voltage, RMS, Ripple Factor, efficiency, Peak Inverse Voltage (PIV).
Zener diode: Characteristics and its application as a voltage regulator
Bipolar Junction Transistor:
Principle of Junction Transistor (including current components, current gains), Types: CE, CB, CC), DC biasing in CE mode: Q-Point, load line analysis, Transistor as an amplifier. Inverter using transistors: Transfer characteristics and threshold voltages

Unipolar Junction Transistor:
Principle of JFET and MOSFET, Depletion and Enhancement mode operations, Concept of NMOS, PMOS and CMOS. CMOS circuits for basic logic gates (NOT, NAND, NOR)

PNPN Devices:

Operational Amplifiers (OPAMP):
Inverting Amplifier, Non-inverting Amplifier, Offset parameters, Inverting and Non-inverting Adder, Differentiator, Integrator, Scale changer and Schmitt Trigger. Concept of Virtual ground, CMRR, Signal Generation using OPAMP: Monostable, Astable (Square wave generator)

Timer: Construction and Functional description of 555, Mono-stable, Bistable and Astable Operation, VCO.

Data Acquisition:
R-2R ladder DAC, Weighted resistor type DAC, Flash Type ADC, Counter, Successive Approximation Register (SAR), Dual Slope ADC and Integrating Type.

CMS-A-CC-2-4-P: Basic Electronic Devices and Circuits Lab.
Core Course-4: Practical: 02 Credits: 40 hours

1. Study the forward characteristic of a p-n junction diode and calculate the static and dynamic resistance of the diode.
2. Construct a Half wave rectifier using power diodes and study its load regulation characteristics with or without capacitor filter.
3. Construct a Full wave rectifier using power diodes and study its load regulation characteristics with or without capacitor filter.
4. Construct a Bridge rectifier using power diodes and study its load regulation characteristics with or without capacitor filter.
5. Study the forward and reverse characteristic of a Zener diode and also determine the value of the current limiting resistance.
6. Construct a Zener Voltage regulator and study its load regulation characteristics.
7. Construct a positive and negative voltage regulator using Three terminal linear voltage regulator 78XX and 79XX. Study its load regulation characteristics.

8. Construct a variable positive voltage regulator using Three terminal linear voltage regulator LM317 and study its load regulation characteristics for different sets of output voltage.

9. Study the Output characteristics of a transistor in CE mode and calculate the gain from the graph.

10. Using Transistor to construct NOT or Invert Operation and draw the transfer characteristics and measure the threshold voltage.

11. Construct and study an Inverting Amplifier using OPAMP with different sets of input and feedback resistors and Calculate the gain from the graph.

12. Construct and study an Non-Inverting Amplifier using OPAMP with different sets of input and feedback resistors and Calculate the gain from the graph.

13. Construct and study an Inverting Adder using OPAMP.

14. Construct and study an Non-Inverting adder using OPAMP.

15. Construct and study a subtractor using OPAMP.

16. Construct and study the OPAMP as a differentiator.

17. Construct and study the OPAMP as a integrator.

19. Construct an Astable Multivibrator using OPAMP.

20. Study and construct a R-2R ladder digital to analog converter.

Text/Reference Books:
1. Electronic Devices & Circuits Theory, Boylested & Nashelsky, PHI.
4. Solid State Electronic Devices, Streetman, PHI.
5. Elements of Electronics, Bagde Singh, S Chand Publication.

SEMESTER – III

CMS-A-CC-3-5-TH: Data Structure
Core Course- 5: Theory: 04 Credits: 60 hours

Introduction to Data Structure: (01 hour)
Abstract Data Type.

Arrays: (05 hours)
1D, 2D and Multi-dimensional Arrays, Sparse Matrices. Polynomial representation (Polynomial Representation as Application).

Linked Lists: (09 hours)
Singly, Doubly and Circular Lists; Normal and Circular representation of Self Organizing Lists; Skip Lists, Polynomial representation (Polynomial Representation as Application).

Stacks: (05 hours)
Implementing single / multiple stack/s in an Array; Prefix, Infix and Postfix expressions, Utility and conversion of these expressions from one to another; Applications of stack; Limitations of Array representation of stack

Queues: (05 hours)
Array and Linked representation of Queue, Circular Queue, De-queue, Priority Queues
Recursion:  
Developing Recursive Definition of Simple Problems and their implementation; Advantages and Limitations of Recursion; Understanding what goes behind Recursion (Internal Stack Implementation)

Trees:  
Introduction to Tree as a data structure; Binary Trees (Insertion, Deletion, Recursive and Iterative Traversals on Binary Search Trees); Threaded Binary Trees (Insertion, Deletion, Traversals); Height-Balanced Trees (Various operations on AVL Trees).

Searching and Sorting:  
Linear Search, Binary Search, Comparison of Linear and Binary Search, Selection Sort, Insertion Sort, Merge Sort, Quick sort, Shell Sort, Comparison of Sorting Techniques

Hashing:  
Introduction to Hashing, Deleting from Hash Table, Efficiency of Rehash Methods, Hash Table Reordering, Resolving collision by Open Addressing, Coalesced Hashing, Separate Chaining, Dynamic and Extendible Hashing, Choosing a Hash Function, Perfect Hashing Function.

CMS-A-CC-3-5-P: Data Structure Lab.
Core Course- 5: Practical: 02 Credits: 40 hours

1. Write a program to search an element from a list. Give user the option to perform Linear or Binary search. Use Template functions.
2. WAP using templates to sort a list of elements. Give user the option to perform sorting using Insertion sort, Bubble sort or Selection sort.
3. Implement Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list and concatenate two linked lists (include a function and also overload operator +).
4. Implement Doubly Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list.
5. Implement Circular Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list.
6. Perform Stack operations using Linked List implementation.
7. Perform Stack operations using Array implementation. Use Templates.
8. Perform Queues operations using Circular Array implementation. Use Templates.
9. Create and perform different operations on Double-ended Queues using Linked List implementation.
10. WAP to scan a polynomial using linked list and add two polynomial.
11. WAP to calculate factorial and to compute the factors of a given no. (i)using recursion, (ii) using iteration
12. (ii) WAP to display fibonacci series (i)using recursion, (ii) using iteration
13. WAP to calculate GCD of 2 number (i) with recursion (ii) without recursion
14. WAP to create a Binary Search Tree and include following operations in tree:
   (a) Insertion (Recursive and Iterative Implementation)
   (b) Deletion by copying
   (c) Deletion by Merging
   (d) Search a no. in BST
   (e) Display its preorder, postorder and inorder traversals Recursively
(f) Display its preorder, postorder and inorder traversals Iteratively
(g) Display its level-by-level traversals
(h) Count the non-leaf nodes and leaf nodes
(i) Display height of tree
(j) Create a mirror image of tree
(k) Check whether two BSTs are equal or not

15. WAP to convert the Sparse Matrix into non-zero form and vice-versa.
16. WAP to reverse the order of the elements in the stack using additional stack.
17. WAP to reverse the order of the elements in the stack using additional Queue.
18. WAP to implement Diagonal Matrix using one-dimensional array.
19. WAP to implement Lower Triangular Matrix using one-dimensional array.
20. WAP to implement Upper Triangular Matrix using one-dimensional array.
21. WAP to implement Symmetric Matrix using one-dimensional array.
22. WAP to create a Threaded Binary Tree as per inorder traversal, and implement operations like finding the successor / predecessor of an element, insert an element, inorder traversal.
23. WAP to implement various operations on AVL Tree.

These are only sample programs, more can be included related to the theory.

Text/Reference Books:

1) Fundamentals of Data Structures in C, Ellis Horowitz, Sartaj Sahni, Susan Anderson-Freed, Silicon Pr.
2) Data Structures: A Pseudocode Approach with C, Richard F. Gilberg and Behrouz A. Forouzan, Cengage Learning
3) Data Structures In C, Noel Kalicharan, CreateSpace Independent Publishing Platform.
4) Adam Drozdek, Data Structures and algorithm in C, Cengage Learning.

CMS-A-CC-3-6-TH: Computational Mathematics
Core Course- 6: Theory: 04 Credits: 60 hours

Introduction: (05 hours)
Sets - finite and Infinite sets, uncountable Infinite Sets; functions, relations, Properties of Binary Relations, Closure, Partial Ordering Relations; counting - Pigeonhole Principle, Permutation and Combination; Mathematical Induction, Principle of Inclusion and Exclusion.

Growth of Functions: (05 hours)
Asymptotic Notations, Summation formulas and properties, Bounding Summations, approximation by Integrals

Recurrences: (06 hours)
Recurrence Relations, generating functions, Linear Recurrence Relations with constant coefficients and their solution, Substitution Method, Recurrence Trees, Master Theorem
Numerical Methods: (20 hours)

Errors in Approximate Calculations: Mathematical Preliminaries, Approximate and Rounding of Numbers, Significant figures, Error and their computation, Propagation of error, Percentage of error.

Interpolation: Newton Forward and Backward interpolation, Lagrange interpolation.

Solving Set of Linear Equations: Gaussian Elimination, Gauss–Jordan Elimination, Iteration method & its convergence condition and testing - Gauss-Seidel Iteration, Gauss-Jacobi Iterative Methods and different types of convergence, divergence.

Solving Non-linear equations: Bisection method, Regula-falsi method, Secant and Newton-Raphson method

Solving Differential Equations: Euler Method, Runge-Kutta second and fourth order method

Numerical Integration: Trapezoidal and Simpson’s 1/3rd Rules.

Line fitting: Linear, Quadratic fit,

Graph Theory (20 hours)

Basic Terminology, Models and Types, Multi graphs and Weighted graphs, Graph Representation, Graph Isomorphism, Connectivity, Euler and Hamiltonian Paths and Circuits, Planar Graphs, Graph Coloring, Trees, Basic Terminology and properties of Trees, Introduction to Spanning Trees

Prepositional Logic: (04 hours)

Logical Connectives, Well-formed Formulas, Tautologies, Equivalences, Inference Theory

CMS-A-CC-3-6-P: Computational Mathematics Lab.

Core Course-6: Practical: 02 Credits: 40 hours

Lab. based on the Graph theory and Numerical Methods using C.

Text/Reference Books:

9. Graph Theory With Applications To Engineering And Computer Science by Narsingh Deo, PHI.
11. Introduction to Graph Theory by D B West, 2nd edition, Pearson Education

15 | P a g e
Introduction to Microcomputer based system: (3 hours)
History of evolution of Microprocessor and Microcontrollers and their advantages and disadvantages.

Microprocessor Architecture and Memory Interfacing: (14 hours)
Basic Architecture of Microprocessor 8085 and explanation of each block, Microprocessor 8085 pin out and signals, Addressing modes, Instruction Formats, Instruction Cycle, Clock Cycle, Multiplexed Address Data Bus, Control and Status signals, Microprocessor and Bus Timing, De-multiplexing of Address Data Bus, Generation of Control Signals for I/O and Memory, Basic concepts in Memory Interfacing, Address Decoding and memory Addresses.

Interfacing I/O Devices: (10 hours)
Basic Interfacing concepts, Peripheral I/O instructions (I/O mapped I/O), Device Selection and data Transfer, Absolute and Partial Decoding, Input Interfacing, Interfacing I/O using decoders, Memory mapped I/O techniques, Interfacing 8155 memory segment.

Programming 8085: (10 hours)
Instruction Set of 8085, Different Programming Techniques, Stack and Subroutines, Counter and Time Delays, Code Conversion, BCD Arithmetic and 16 bit Data Operation.

Interfacing Peripheral (I/O) and Applications: (13 hours)
Interrupts: 8085 Interrupt, RST instructions, Software and Hardware interrupt, multiple Interrupts and Priorities, 8085 Vectored Interrupts, Restart as Software Instructions. Interfacing Digital to Analog Converters, Analog to Digital Interfacing, keyboard interfacing, interfacing 8255 (Mode - 0, BSR), Support IC chips- 251,8237/8257,8259

Microprocessor 8086: (10 Hours)
The 8086 microprocessor- Architecture, Instruction set, Addressing modes, Interrupts, Memory interfacing with 8086.

CMS-A-CC-3-7-P: Programming Microprocessor 8085
Core Course- 7: Practical: 02 Credits: 40 hours
1. Assembly Language Programming for Arithmetic Operations like Addition, Subtraction, Multiplication and Division on 8, 16 bit data.
2. Assembly Language Programming for different logical operations.
3. Assembly Language Programming for code conversions.
4. Assembly Language Programming for different sorting techniques.
5. Assembly Language Programming for memory block transfer.
7. Assembly Language Programming for HCF, LCM etc.
10. Block Replacement and transfer
Many more programs can be included related to the programming techniques of Microprocessor 8085

**Text/Reference books:**

4. Advanced Microprocessors by Ray and Bhurchandi - TMH.
6. Microprocessors and Interfacing by Douglas V. Hall, Mcgraw Hill International

**Skill Enhancement Course: SEC-A: Choice -1: Theory: 02 Credit: 40 hours**

**Introduction:**
Basic concepts of Graphics Devices – Monochrome and Color Monitor displaying technique only and Printing technique of Printer device, Physical and logical units of graphics devices – Pixel and its different properties, Basic idea for image or picture formation using pixels – Raster Scan and Vector Scan, Image Color Model, Color Coding, Lookup Table based color mapping, Video Memory, Image Frame and frame image data areas of an image file.

**Graphics Kernel System:**
Basic elements, its representations and related operations, layered structures, hardware and software operation elements

**Basic geometrical shapes formation algorithms:**
Concepts Co-ordinate System, Line Segment, Circle and arc segment, elliptic segment and its formation DDA, Bresenham’s and Midpoint scan conversion algorithms.
Basic Operations on Images:

**Two and Three Dimensional Transformations:**
Geometric Transformations operations - Translation, Rotation, Scaling. Reflection, Shearing and Inverse of these operations, Homogeneous coordinate system representation, matrix representation
Coordinate Transformations operations - Translation, Rotation, Scaling. Reflection, Shearing and Inverse of these operations, Homogeneous coordinate system representation, matrix representation
Composite Transformations Operations – Basic ideas and matrix representations by matrix concatenation for a particular operation
Two and Three Dimensional Clipping: (05 Lectures)
Point Clipping, Line Clipping – Region coding, Cohen-Sutherland Algorithm, Midpoint subdivision Algorithm; Polygon and Polygon net model storing – Explicit Vertex method, Polygon Listing and Explicit Edge Listing and Basic Idea of Polygon Clipping (No mathematical foundation and algorithms)

Projection: (10 Lectures)
Basic Concept of Projection operation and its application, Classification – Perspective, Parallel and its subclasses, Principles of these projections (Geometric representation only, no Mathematical Foundation and algorithms)

Applications: (02 Lectures)
Basic Concepts Computer Art – publishing, drawing and drafting, Animation – Animating and modeling of real world, Morphing – Classification of morphing and Application to the Advertisements and publicities

Text/ Reference Books:
2. Computer Graphics by Hern & Baker
4. Computer Graphics by Folly & Vandam

Skill Enhancement Course: SEC-A: Choice -2: Theory: 02 Credit: 40 hours

Introduction to Wireless sensor networks (02 hours)
Definition and background, challenges and constrains, Applications (qualitative discussion.
Node architecture (03 hours)
Sensing subsystem, The processor subsystem, communication interface and prototypes.

Operating System (05 hours)
Functional aspects, non-functional aspects, Prototypes.

Basic Architectural framework
Physical Layer (08 hours)
Basic components, source coding, channel encoding, Modulation and signal properties.

Medium Access control (05 hours)
Wireless MAC protocols, characteristics of MAC protocols in sensor networks, contention free MAC protocols, contention based MAC protocols, Hybrid MAC protocols.

Network layer (03 hours)
Data centric routing, proactive routing and on-demand routing, hierarchical routing, location based routing.

Node and network Management (07 hours)
Security (qualitative discussion only.) (07 hours)
Fundamental of network security, challenges in wireless sensor networks, security attacks, protocols and mechanisms in wireless sensor networks.

Text/ Reference Books:

6. Internet Of Things by Bahga, Madishetty, Orient Blackswan pvt Ltd.
7. IOT fundamentals, David, Pearson Education.
8. Internet Of Things by Tripathy and Anuradha, CRC Press.
Data Communication Concepts  
Analog and Digital Signals, Periodic and Non-periodic signals, Time and Frequency Domain, Bandwidth and Data rate, Signal rate, Serial and Parallel Transmission

Various Modes of Transmission  
Simplex/ Half Duplex, Duplex; Features of guided and unguided transmission media; Circuit switching: time division & space division switch;

Physical Structure of Network  
Types of connections (Topologies), Categories of Computer Network: LAN, MAN, WAN
Modulation and Encoding: AM, FM, PM; Multiplexing: FDM, TDM, WDM, PCM, OSI Model Architecture

Internet Technology  
Internet Architecture, Client/Server architecture of Internet network, OSI Reference Model, Need of Internet protocols – TCP/IP, Ports, Domain Name Server (DNS), Internet service providers, Dial up, ISDN, CRC, Routing, Cable, Modem, E-mail, IRC, Voice & Video
Conferencing, Browsers, WWW, Google services, Internet advertising, ATM, Web tools-HTTP

**CMS-A-CC-4-8-P: Computer Networks and Web Design**

**Core Course- 8: Practical: 02 Credit: 40 hours**

**Computer Networks: Practical:** (05 hours)
Familiarization with Networking cables (CAT5, CAT6, UTP), Connectors (RJ-45, T-connector), Hubs, Switches, LAN installation & configuration (peer-to-peer) process.

**Web Design: Practical:** (35 hours)
Web page design by HTML & PHP

**PHP Programming (1 +2 Lab)**

**Introduction to PHP** (3L)
- PHP introduction, inventions and versions, important tools and software requirements (like Web Server, Database, Editors etc.)
- PHP with other technologies, scope of PHP
- Basic Syntax, PHP variables and constants
- Types of data in PHP, Expressions, scopes of a variable (local, global)
- PHP Operators: Arithmetic, Assignment, Relational, Logical operators, Bitwise, ternary and MOD operator.
- PHP operator Precedence and associativity

**Handling HTML form with PHP** (5L)
- Capturing Form Data
- GET and POST form methods
- Dealing with multi value fields
- Redirecting a form after submission

**PHP conditional events and Loops** (3L)
- PHP IF Else conditional statements (Nested IF and Else)
- Switch case, while, For and Do While Loop
- Goto, Break, Continue and exit

**PHP Functions** (2L)
- Function, Need of Function, declaration and calling of a function
- PHP Function with arguments, Default Arguments in Function
- Function argument with call by value, call by reference
- Scope of Function Global and Local

**String Manipulation and Regular Expression** (2L)
- Creating and accessing String, Searching & Replacing String
- Formatting, joining and splitting String, String Related Library functions
- Use and advantage of regular expression over built-in function
- Use of preg_match(), preg_replace(), preg_split() functions in regular expression

**Array** (2L)
- Anatomy of an Array, Creating index based and Associative array, Accessing array
Looping with Index based array, with associative array using each() and foreach()

Some useful Library function

Text/ Reference Books:

CMS-A-CC-4-9-TH: Introduction to Algorithms & its Applications
Core Course- 9: Theory:  04 Credit:      60 hours

Introduction to Algorithms: 
Definition, Characteristics, Recursive and Non-recursive algorithms.

Asymptotic Complexity Analysis of Algorithms:
Space and Time Complexity, Efficiency of an algorithm, Growth of Functions, Polynomial and Exponential Complexity, Asymptotic Notations: Big O Notation and Small o notation, Big Ω and Small ω, Big Θ and Small ϕ Notations, Properties: Best case/worst case/average case analysis of well-known algorithms.

Algorithm Design Techniques:
Concepts and simple case studies of Greedy algorithms. Divide and conquer: Basic concepts, Case study of selected searching and sorting problems as divide and conquer techniques: Dynamic programming: General issues in Dynamic Programming, Case study of Binomial Coefficient computation.

Graph Representation and Algorithm:
Graph traversal algorithms: BFS, DFS, Minimal spanning trees: Prim's Algorithm, Kruskal's Algorithm, Shortest path algorithms: Floyd's Algorithm, Floyd-Warshall Algorithm, Dijkstra's Algorithm, Graph Coloring Algorithms.

Classification of Problems:
P, NP, Satisfiability, Cook’s Theorem (Statement Only).

Core Course- 9: Practical:  02 Credit:      40 hours

Lab. based on Graph Theory and Numerical Methods using C

Graph Algorithms:
Implementation of Graph algorithms: Single Spanning Tree Generation using - BFS, DFS, Minimal Spanning Tree Generation using - Prim's Algorithm, Kruskal’s Algorithm, Shortest
Path finding using - Floyd's Algorithm, Floyd-Warshall Algorithm, Dijkstra's Algorithm, Graph Partitioning Algorithm.

**Text/References Books:**
1. Introduction to Algorithms, Cormen, Leiserson, Rivest and Stein, TMH.
2. The Design and Analysis of Algorithms, Aho, Hopcroft and Ullman, Pearson Education.
4. Algorithm Design, Jon Kleinberg and Eva Tardos, Pearson Education

**CMS-A-CC-4-10-TH: Operating System**

**Core Course- 10: Theory: 04 Credit: 60 hours**

**Introduction** (10 hours)
Basic OS functions, types of operating systems batch systems–multiprogramming systems, time sharing systems; operating systems for personal computers & workstations, process control & real time systems.

**Operating System Organization** (6 hours)
Processor and user modes, kernels, system calls and system programs.

**Process** (15 hours)
System view of the process and resources, process hierarchy, threads, threading issues, thread libraries;

**Process Scheduling**
Preemptive and non-preemptive scheduling, Long term, short term and medium term

**Process Synchronization:** Concurrent and processes, critical section, semaphores and application, methods for inter-process communication;

**Deadlock:** (10 hours)
Definition, Prevention, Avoidance, Detection, Recovery.

**Memory Management** (10 hours)
Physical and virtual address space; memory allocation strategies –fixed and variable partitions, paging, segmentation, virtual memory

**File and I/O Management** (5 hours)
Directory structure, file operations, file allocation methods, disc management.

**Protection and Security** (4 hours)
Policy mechanism, Authentication, Internal access Authorization.
Shell programming and O.S. internals

1. WRITE A PROGRAM (using fork() and/or exec() commands) where parent and child execute:
   a) same program, same code.
   b) same program, different code.
   c) before terminating, the parent waits for the child to finish its task.
2. WRITE A PROGRAM to report behavior of Linux kernel including kernel version, CPU type and model. (CPU information)
3. WRITE A PROGRAM to report behavior of Linux kernel including information on configured memory, amount of free and used memory. (memory information)
4. WRITE A PROGRAM to print file details including owner access permissions, file access time, where file name is given as argument.
5. WRITE A PROGRAM to copy files using system calls.
6. Write program to implement FCFS scheduling algorithm.
7. Write program to implement Round Robin scheduling algorithm.
8. Write program to implement SJF scheduling algorithm.
9. Write program to implement non-preemptive priority based scheduling algorithm.
10. Write program to implement preemptive priority based scheduling algorithm.
11. Write program to implement SRBJ scheduling algorithm.
12. Write program to calculate sum of n numbers using thread library.
13. Write a program to implement first-fit, best-fit and worst-fit allocation strategies.

The above examples are only samples, more can be included related to the theory.

Text/Reference Books:

Skill Enhancement Course: SEC-B: Information Security/ E-Commerce

CMS-A-SEC-B-4-1-TH: Information Security
Skill Enhancement Course: SEC-B: Choice -1: Theory: 02 Credit: 40 hours

Overview

Overview of Security Parameters: Confidentiality, Integrity and availability—security violation, Assumptions and Trust—Security assurance, OSI security architecture,
Cryptography (10 hours)
Mathematical Tools for Cryptography, Symmetric Encryption Algorithm, Theory of Block
cipher design, Symmetric cipher model, Risk assessment, quantitative and qualitative
approaches, Network security management, Firewalls, Web and wireless security
management, Computer security log management, IT security infrastructure, Operating
system security, user security, program security

Finite Field and Number Theory: (03 hours)
Groups, Rings, Fields-Modular, Prime numbers, Fermat's and Euler's Theorem, Chinese
remainder Theorem, Discrete Logarithm.

Hash Functions and Digital Signatures (05 hours)
Authentication requirement – Authentication function -MAC, Hash functions, Security of
hash function, Hashing Algorithms: MD5.

Internet Firewalls for Trusted System: (02 hours)
Roles of Firewalls, Firewall related terminology, Types of Firewalls, Firewall designs,

E-Mail, IP & Web Security (Qualitative study) (05 hours)
E-mail Security: Security Services for E-mail-attacks possible through E-mail, Pretty Good
S/MIME.
IP Security: Overview of IPSec, IP Security Architecture, Authentication Header,
Encapsulation Security Payload.
Web Security: Secure Socket Layer/Transport Layer Security, Basic Protocol, SSL Attacks,
Secure Electronic Transaction (SET).

Cyber Law (10 hours)
Cyber laws to be covered as per IT 2008:
Definitions, Digital Signature And Electronic Signature.
1) [Section 43] Penalty and Compensation for damage to computer, computer system,
etc.
2) [Section 65] Tampering with Computer Source Documents.
3) [Section 66 A] Punishment for sending offensive messages through communication
service, etc.
4) [Section 66 B] Punishments for dishonestly receiving stolen computer resource or
communication device.
5) [Section 66C] Punishment for identity theft.
6) [Section 66D] Punishment for cheating by personation by using computer resource.
7) [Section 66E] Punishment for violation of privacy.
8) [Section 66F] Punishment for cyber terrorism.
9) [Section 67] Punishment for publishing or transmitting obscene material in electronic
form.
10) [Section 67A] Punishment for publishing or transmitting of material containing
sexually explicit act, etc. in electronic form.
11) [Section 67B] Punishment for publishing or transmitting of material depicting children in sexually explicit act, etc. in electronic form.
12) [Section 72] Breach of confidentiality and privacy.

Text/ Reference Books:

CMS-A-SEC-B-4-2-TH: E-Commerce
Skill Enhancement Course: SEC-B: Choice -2: Theory: 02 Credit: 40 hours

An introduction to Electronic commerce: (05 hours)

The Internet and WWW: (10 hours)
Evolution of Internet, Domain Names and Internet Organization (.edu, .com, .mil, .gov, .net etc.) , Types of Network, Internet Service Provider, World Wide Web, Internet & Extranet, Role of Internet in B2B Application, building own website, Cost, Time, Reach, Registering a Domain Name, Web promotion, Target email, Banner, Exchange, Shopping Bots

Internet Security: (10 hours)

Electronic Data Exchange: (05 hours)
Planning for Electronic Commerce:  (05 hours)
Planning Electronic Commerce initiates, Linking objectives to business strategies, Measuring cost objectives, Comparing benefits to Costs, Strategies for developing electronic commerce web sites.

Internet Marketing:  (05 hours)
The PROS and CONS of online shopping, The cons of online shopping, Justify an Internet business, Internet marketing techniques, The E-cycle of Internet marketing, Personalization e-commerce.

Text/Reference Books:

2. The E-Commerce Book, Teffano Korper and Juanita Ellis, Morgan Kaufmann
3. E-Commerce 2017, Kenneth C. Laudon and Carol Guercio Traver, Pearson

SEMESTER – V: Core Courses

CMS-A-CC-5-11-TH: Database Management System

Core Course- 11: Theory: 04 Credit: 60 hours

Introduction (4 hours)
Drawbacks of Legacy System; Advantages of DBMS; Layered Architecture of Database, Data Independence; Data Models; Schemas And Instances; Database Languages; Database Users, DBA; Data Dictionary; Functional Components of a DBMS

Entity Relationship(ER) Modeling (4 hours)
Entity, Attributes and Relationship, Structural Constraints, Keys, ER Diagram of Some Example Database, Weak Entity Set, Specialization and Generalization, Constraints of Specialization and Generalization, Aggregation.

Relational Model (8 hours)
Basic Concepts of Relational Model; Relational Algebra; Tuple Relational Calculus; Domain Relational Calculus.

Integrity Constraints (4 hours)
Domain Constraints, Referential Integrity, Assertions, Triggers.

Relational Database Design (8 hours)
Problems of Un-Normalized Database; Functional Dependencies (FD), Derivation Rules, Closure Of FD Set, Membership Of A Dependency, Canonical Cover; Decomposition to 1NF, 2NF, 3NF Or BCNF Using FD; Lossless Join Decomposition Algorithm; Dependency preservation.

SQL (20 hours)
Basic Structure, Data Definition, Constraints and Schema Changes; Basic SQL Queries (Selection, Insertion, Deletion, Update); Order by Clause; Complex Queries, Aggregate Function and Group by Clause; Nested Sub Queries; Correlated Sub Queries; Views (Insert-Able and Updatable), Joined Relations; Set Comparisons (All, Some); Derived Relations Etc; Grant and Revoke, Transaction in SQL.

Record Storage and File Organization (Concepts only) (8 hours)
Fixed Length and Variable Length Records; Spanned and Un-Spanned Organization of Records; Primary File Organizations and Access Structures Concepts; Unordered, Sequential, Hashed; Concepts of Primary and Secondary Index; Dense and Sparse Index; Index Sequential Files; Multilevel Indices.

Transaction Processing (Concepts only) (4 hours)
ACID Properties; Transaction States, Concurrent Execution; Serializability (Conflict and View), Recoverability, Test for Serializability.

CMS-A-CC-5-11-P: Relational Database Management System

Core Course- 11: Practical: 02 Credit: 40 hours

RDBMS Lab using My SQL & PHP
Text/ Reference Books :
5. SQL and Relational Theory: How to Write Accurate SQL Code, Christopher J. Date, O'Reilly Media

CMS-A-CC-5-12-TH: Object Oriented Programming System (OOPs)
Core Course- 12: Theory: 04 Credit: 60 hours

Introduction to Java (4 hours)
Java Architecture and Features, Understanding the semantic and syntax differences between C++ and Java, Compiling and Executing a Java Program, Variables, Constants, Keywords, Data Types, Operators (Arithmetic, Logical and Bitwise) and Expressions, Comments, Doing Basic Program Output, Decision Making Constructs (conditional statements and loops) and Nesting, Java Methods (Defining, Scope, Passing and Returning Arguments, Type Conversion and Type and Checking, Built-in Java Class Methods),

Arrays, Strings and I/O (8 hours)
Creating & Using Arrays (One Dimension and Multi-dimensional), Referencing Arrays Dynamically, Java Strings: The Java String class, Creating & Using String Objects, Manipulating Strings, String Immutability & Equality, Passing Strings To & From Methods, String Buffer Classes. Simple I/O using System.out and the Scanner class, Byte and Character streams, Reading/Writing from console and files.

Object-Oriented Programming Overview (4 hours)
Principles of Object-Oriented Programming, Defining & Using Classes, Controlling Access to Class Members, Class Constructors, Method Overloading, Class Variables & Methods, Objects as parameters, final classes, Object class, Garbage Collection.

Inheritance, Interfaces, Packages, Enumerations, Autoboxing and Metadata (14 hours)

Exception Handling, Threading, Networking and Database Connectivity (15 hours)
Exception types, uncaught exceptions, throw, built-in exceptions, Creating your own exceptions; Multi-threading: The Thread class and Runnable interface, creating single and multiple threads, Thread prioritization, synchronization and communication, suspending/resuming threads. Using java.net package, Overview of TCP/IP and Datagram programming. Accessing and manipulating databases using JDBC.
Applets and Event Handling  
Java Applets: Introduction to Applets, Writing Java Applets, Working with Graphics, Incorporating Images & Sounds. Event Handling Mechanisms, Listener Interfaces, Adapter and Inner Classes. The design and Implementation of GUIs using the AWT controls, Swing components of Java Foundation Classes such as labels, buttons, textfields, layout managers, menus, events and listeners; Graphic objects for drawing figures such as lines, rectangles, ovals, using different fonts. Overview of servlets.

CMS-A-CC-5-12-P: Object Oriented Programming Lab.  
Core Course- 12: Practical: 02 Credit: 40 hours  
OOPs Lab Using JAVA

Text/Reference Books
3. Effective Java by Joshua Bloch, Publisher: Addison-Wesley.  
4. Core Java 2 by Cay S. Horstmann, Gary Cornell, Volume 1, Prentice Hall.  
6. Java: How to Program by Paul Deitel, Harvey Deitel, Prentice Hall.  
7. Programming with JAVA by John R. Hubbard, Schaum's Series.

SEMESTER – VI: Core Courses

CMS-A-CC-6-13-TH: Software Engineering  
Core Course-13: Theory: 04 Credit: 60 hours

Introduction:  
(3 hours)  
Defining system, open and closed system, modeling of system through computer hardware, communication systems, external agents and software systems; Importance of Engineering Methodology towards computerization of a system

Software Life Cycle:  
(5 hours)  
Classical and Iterative Waterfall Model; Spiral Model and its importance towards application for different system representations, Comparative Studies

Software Requirement and Specification Analysis:  
(25 hours)  
Requirements Principles and its analysis principles; Specification Principles and its representations  
Software Design Analysis – Different level of DFD Design, Physical and Logical DFD, Use and Conversions between them, Process Representation – Pseudo English, Tight English, Decision Tables and Trees, Structured analysis – Structure Chart Conversion from DFD: Transform Centric and Transaction Centric conversions algorithms, Coupling and Cohesion of the different modules  
Software Cost Estimation Modeling – Heuristic and Empirical Modeling; COCOMO
Software Testing: (17 hours)
Software Verification and Validation; Testing objectives, Testing Principles, Testability; Error and Faults; Unit Testing, White Box and Blank Box Testing, Test Case Design: Test Vector, Test Stub,

Software Quality Assurances: (10 hours)

Core Course-13: Practical: 02Credit: 40 hours
Based on some real life problems design: SRS, DFD, ERD

Text/Reference Books:
5. Software Engineering for Students by D. Bell, Addison-Wesley.
6. Fundamentals of Software Engineering by R. Mall, PHI.

CMS-A-CC-6-14-TH: Theory of Computation
Core Course-14: Theory: 04Credit: 60hours

Finite Automata: (15 hours)
Definition of a Finite Automaton, Model, Representation, Classification – with respect to output function Mealy and Moore Machines, with respect to State Transition – Deterministic and Non-Deterministic Machine, Examples, conversion algorithms Mealy to Moore and Moore to Mealy, Non-Deterministic to equivalent Deterministic-Optimized and Non-optimized technique ideas and algorithms, with null transition and without null transitions, Finite and Infinite state machines, Removal of Null-transitions, Acceptability of String by a Finite Automaton, Design of different Finite State Machines – examples like serial adder, serial parity generator, sequence generator and checker etc, Minimized Equivalent Machine, State Minimization Algorithm – Row elimination method, Implication Table Method

Formal Languages and Grammar: (15 hours)
Introduction to Formal Grammar and Language, Formal Definition, Chomsky’s Classification of Grammar – Type 0, Type-1 or Context Sensitive, Type-2 or Context Free and Type-3 or Regular Grammar, Illustration of each of these classes with example, Sentential form, Sentences – Languages or strings, Derivations – left, right and random derivation, Derivation tree, Parse Tree, Syntax Tree, Ambiguous Grammar and Language, Designing of Grammar for a language, Finding Language for Given Grammar, Finding
Equivalent Minimized Context Free Grammar –a) by the removing Grammar Variables which are not generating any terminal string, and b) by the removing Terminal Symbols which are not generating from the start symbol and c) by the removing null production and d) by the removing unit production, Definition and basic idea about Push Down Automaton

**Regular Expression:**
(15 hours)
Basic Idea and Definition, Regular Expression basic Identities, Arden’s Theorem – Statement (without Proof) and application for reduction of equivalent regular expressions, Thompson’s Construction Algorithm – Regular expression to Finite Automata conversion, State Transition System to Regular Expression conversion algorithm by Arden’s Algebraic Method, FA to Regular Grammar and Regular Grammar to FA conversion algorithms and applications.

**Turing Machine:**
(15 hours)
Concepts of Turing Machine, Formal Definitions, Classifications – Deterministic and Non-Deterministic Turing Machines, Simple Design of Turing Machines like – Unary Adder, Subtractor, Concatenator, Odd / even count etc and concepts of Universal Turing Machines and Turing Computing, Difference and Similarities between Turing Machine and a General Purpose Computer, Definition and significant of Halting Problem in Turing Machine.

**CMS-A-CC-6-14-P: Project**
**Core Course-14:Practical:02Credit:40hours**

**Text/ Reference Books:**
5. Formal Language and Automata, P. Linz, Narosa

**Discipline Specific Elective Course A: DSE-A:**
**Digital Image Processing/ Data Mining & its Applications/ Embedded Systems/ Multimedia and its Applications**

**DSE-A: Choice-1: Theory: 04 Credit: 60 hours**

**Introduction**
(05 hours)
Image definition and its representation, Pixels, Co-ordinate conventions, Image formats (Study of the image matrix), neighbourhood metrics, Sampling and quantization, Types of distance measure (concept only).
Spatial Domain  
(10 hours)
Image enhancement techniques in spatial domain, Contrast stretching, Histogram Processing, Noise smoothing, Sharpening, Pixel Classification.

Thresholding  
(15 hours)
Grey level thresholding, global/local thresholding, Iterative thresholding, Edge detection operators, Region growing, Split/merge techniques, Image feature/primitive extraction, Background correction, Color enhancement

Image restoration  
(15 hours)
Basic Framework, Interactive Restoration, Image deformation and geometric transformations, image morphing, Restoration techniques, Noise characterization, Noise restoration filters, Restoration from projections, Hough transform, Huffman coding, Segmentation

Image Segmentation  
(15 hours)
Boundary detection based techniques, Point, line detection, Edge detection, Local processing, Regional processing, Region-based segmentation.

DSE-A: Choice-1: Practical: 02 Credit: 40 hours

Text/Reference Books:
2) Digital Image Processing by Jayaraman and Veerakumar, TMH.
5) Digital Image Processing; A remote sensing perspective by Jensen, Pearson.

CMS-A-DSE-A--2-TH: Data Mining and its Applications
DSE-A: Choice-2: Theory: 04 Credit: 60 hours

Introduction:  
(15 hours)
Definition of Data Mining, Data pre-processing, Data cleaning, Data transformation, Data Reduction, Data Visualization, Data extraction from large dataset, Data integration, sub-sampling, Feature selection, Scalability issues of data mining algorithms, text mining, web mining.

Classification and Prediction:  
(30 hours)
Structural patterns of data, Tools for pattern recognition (preliminary concept), Linear models for classification, Evaluating the accuracy of the classifier or predictor, Bayesian Classification, Training and Test sets, Parametric and Non-parametric Learning, Minimum
Distance Classifiers, k-NN rule, Discriminant Analysis, Decision trees. Similarity Measure, Basic hierarchical and non-hierarchical Clustering algorithms, Some Applications, Neural Learning,

**Data Warehousing (DWH):** (15 hours)
Introduction: Definition and description, need for data warehousing, need for strategic information, failures of past decision support systems, Application of DWH.

**CMS-A-DSE-A–2-P: Data Mining Lab.**
**DSE-A: Choice-2: Practical: 02 Credit: 40 hours**
Data mining using PYTHON/C

**Text/ Reference Books :**

4. Data Mining Concepts and Techniques by Jiawei Han and Micheline Kamber, Morgan Kaufmann Publishers.
5. Data Warehousing, Data Mining and OLAP by Berson, Tata McGraw Hill.
6. Introduction to Data Mining by Pang-Ning Tan, Michael Steinbach, Vipin Kumar, Pearson Education.

**DSE-A: Choice-3: Theory: 04 Credit: 60 hours**

**Introduction to 8051:** (10 hours)
Overview of Microcontroller, Memory, I/O interface
Intel Microcontroller 8051: Architecture, Peripheral Interface Controller (PIC).

**Assembly Language Programming:** (10 Hours)
Instruction set, Addressing Modes, Jump, Loop and Call instructions, I/O Manipulation, Serial communication, Arithmetic and logical instructions.

**Introduction to Embedded System Programming:** (15 Hours)
Data types and time delays, I/O programming, Logic operations, Data conversions, Data serialization, Interrupt programming, LCD and Keyboard interfacing, ADC, DAC, sensors interfacing, interfacing 8255, I/O interfacing for 8051, interfacing 8255, 8257, 8259/8279, ADC, DAC, Motor control using 8051 C.
Programmable logic devices and Hardware description Language: (10 Hours)
PAL, PLA, PLD, ASIC, FPGA (Qualitative study).

Hardware Description Language (VHDL): (15 Hours)
Basic Terminology, Entity Declaration, Architecture body, Configuration and package declaration, Package body, Model analysis and Simulation.
Basic Language elements, Behavioral Model, Dataflow Model, Structural Model, Subprogram and overloading, Applications.

DSE-A: Choice-3: Practical: 02 Credit: 40 hours

Practical: Sample practical problems can be included related to theory.
1. Assembly Language Programming related to Microcontroller 8051.
3. VHDL programs for construction and simulation of various digital circuits.

Text/Reference Books:
5. A VHDL Primer, J. Bhasker, Prentice Hall

CMS-A-DSE-A--4-TH: Multimedia and its Applications
DSE-A: Choice-4: Theory: 04 Credit: 60 hours

Multimedia: (04 hours)
Introduction to multimedia, Components, Uses of multimedia.

Making Multimedia: (06 hours)
Stages of a multimedia project, Requirements to make good multimedia, Multimedia Hardware - Macintosh and Windows production Platforms, Hardware peripherals - Connections, Memory and storage devices, Multimedia software and Authoring tools.

Text: (04 hours)

Images: (06 hours)

Sound: (06 hours)
Digital Audio, MIDI Audio, MIDI vs Digital Audio, Audio File Formats.
Video: (06 hours)

Animation: (08 hours)

Multimedia System: (10 hours)
An overview of multimedia system and media streams, Source representation and compression techniques text, speech and audio, still image and video, Graphics and animation.

Multi-modal Communication: (10 hours)
Video conferencing, networking support, Trans-coding

DSE-A: Choice-4: Practical: 02 Credit: 40 hours
Sample practical problems can be included related to theory.

Text/ Reference Books:
1. Multimedia: Making it work by Tay Vaughan, TMH.
3. Multimedia Handbook by Keyes, TMH.

Discipline Specific Elective Course B: DSE-B:
Operation Research/ Programming using Python/ Introduction to Computational Intelligence/ Advanced Java

DSE-B: Choice-1: Theory: 04 Credit: 60 hours

Introduction: (05 hours)
Origin and development of operation research, Nature and characteristic features, models in O.R., application of O.R.

Linear Programming Problem: (05 hours)
Introduction, mathematical formulation of the problem and graphical solution method.

Simplex Method: (20 hours)
Introduction, computational procedure, artificial variable, problem of degeneracy, application of simplex method.
Duality: (10 hours)
Concept, formulation of primal – dual, duality and simplex method, Dual Simplex method.

Transportation Problem: (05 hours)
Introduction, mathematical formulation, finding initial basic feasible solution, optimality, degeneracy, unbalanced transportation problem.

Assignment Problem: (05 hours)
Introduction, mathematical formulation and solution.

Game Theory: (05 hours)
Some basic terminology, Two-person Zero-sum Game, Game without Saddle Point – Mixed strategy, Algebraic method for 2×2 Game

Network Scheduling: (05 hours)
Introduction, Critical Path Method (CPM), PERT calculation.

CMS-A-DSE-B--1-P: Operation Research (O.R.) Lab. using C/ Python
DSE-B: Choice-1: Practical: 02 Credit: 40 hours
Lab sessions related to Theory.

Text/ Reference Books:

DSE-B: Choice-2: Theory: 04 Credit: 60 hours

Planning the Computer Program: (02 hours)
Concept of problem solving, Problem definition, Program design, Debugging, Types of errors in programming, Documentation.

Techniques of Problem Solving: (02 hours)
Flowcharting, decision table, algorithms, Structured programming concepts, Programming methodologies viz. top-down and bottom-up programming.

Overview of Programming: (02 hours)
Structure of a Python Program, Elements of Python
Introduction to Python: (04 hours)
Python Interpreter, Using Python as calculator, Python shell, Indentation, Atoms, Identifiers and keywords, Literals, Strings, Operators (Arithmetic operator, Relational operator, Logical or Boolean operator, Assignment, Operator, Ternary operator, Bit wise operator)

Creating Python Programs: (20 hours)
Input and Output Statements, Control statements (Branching, Looping, Conditional Statement, Exit function, Difference between break, continue and pass.), Defining Functions, default arguments, Exception handling.

Iteration and Recursion: (10 hours)
Conditional execution, Alternative execution, Nested conditionals, Return statement, Recursion, Stack diagrams for recursive functions, Multiple assignment, while statement, for statement.

Strings and Lists: (15 hours)
String as a compound data type, Length, Traversal and the for loop, String slices, String comparison, A find function, Looping and counting, List values, Accessing elements, List length, List membership, Lists and for loops, List operations, List deletion. Cloning lists, Nested lists

Object Oriented Programming: (05 hours)
Introduction to Classes, Objects and Methods, Standard Libraries.

DSE-B: Choice-2: Practical: 02 Credit: 40 hours
Open Source Computer Programming Language Python

Text/ Reference Books :
2. Allen Downey, “Think Python: How to Think Like a Computer Scientist”, O’Reilly
5. Learning to Program in Python 2017, P. M. Heathcote, PG Online Limited
6. Python Programming Fundamentals, Authors: Lee and Kent D.

CMS-A-DSE-B--3-TH: Introduction to Computational Intelligence
DSE-B: Choice-3: Theory: 04 Credit: 60 hours
Introduction (20 hours)
Introduction to Artificial Intelligence, Brief History and Application, Structures and Strategies for state space search- Data driven and goal driven search, Heuristic search, Depth First and Breadth First search, Iterative deepening, A* algorithm, Game playing (Minimax), Rule-based system, Semantic Nets, Frames, Scripts, Conceptual Dependency, Introduction to PROLOG.
Neural Network (20 hours)
Basics of Artificial Neural Network, Characteristics and Comparison with biological neural network, Basic model of Artificial Neural Network: Single layer Perceptron model, Learning, Feed Forward Neural Network, Error, Back Propagation and weight updation, Perceptron, Bayesian Networks, Neural computational model- Hopfield Nets.

Rough sets (02 hours)
Basic difference between Rough sets and Fuzzy sets

Fuzzy Logic and Application (18 hours)
Fuzzy sets, application – basic operations, Properties, Fuzzy Relations, Fuzzy inference, Notion of Fuzziness, Operations on Fuzzy sets, Fuzzy Numbers, Brief overview of crisp sets, Crisp relations, Fuzzy relations, Max*-composition of fuzzy relation, Max*-transitive closure, Probability measures of fuzzy events, Fuzzy expected value, Approximate reasoning, Different methods of role aggregation and defuzzification,

CMS-A-DSE-B-3-P: Computational Intelligence Laboratory
DSE-B: Choice 3: Practical: 02 Credit: 40 hours

Text/ Reference Books:
1. Christopher M. Bishop, “Pattern Recognition and Machine Learning”.
3. David Kriesel, “A Brief Introduction to Neural Network”.
5. Ivo Duntsch & Gunther Gediga, “Rough Set Data Analysis : A road to Non-invasive Knowledge Discovery”, Methodos.

CMS-A-DSE-B--4-TH: Advanced Java
DSE-B: Choice-4: Theory: 04 Credit: 60 hours

Basics of Servlet (10 hours)

Session Tracking (04 hours)
Cookies, Hidden Form Field, URL Rewriting, Http Session

Basics of JSP (10 hours)
Life cycle of JSP, JSP API, JSP in Eclipse and other IDE's, Scripting elements, Implicit Objects, Directive Elements, Exception Handling, Action Elements, MVC in JSP.

JavaMail API (06 hours)
Sending Email, Sending email through Gmail server, Receiving Email, Sending HTML content
Design Pattern (06 hours)
Singleton, DAO, DTO, MVC, Front Controller, Factory Method

Introduction to JavaEE (08 hours)
The Need for JavaEE, Overview on the JavaEE Architecture, The EJB Model, Session Beans, JMS Overview.

Javascript (06 hours)
Introduction to Javascript, Ways to use Javascript, Working with events, Client-side Validation.

JQuery (10 hours)
Introduction to JQuery, Validation using JQuery, JQuery Forms, JQuery Examples, Key Services of the Application Server.

CMS-A-DSE-B-4-P: Advanced Java Laboratory
DSE-B: Choice 4: Practical: 02 Credit: 40 hours

Text/Reference Books:
1. Core Servlets and Javaserver Pages: Core Technologies, Marty Hall and Larry Brown, Prentice Hall.
5. Professional JavaScript for Web Developers, Nicholas C. Zakas, Wrox
6. Java Design Pattern Essentials, Tony Bevis, Ability First Limited
7. Design Patterns: Elements of Reusable Object-Oriented Software, Erich Gamma, Richard Helm, Ralph Johnson and John Vlissides, Addison-Wesley Professional

| CMS-G-CC-1-1-TH  
Sem-1-Core Course-1 Theory | Computer Fundamentals and Digital Logic Design | 60 hours | 04 |
| CMS-G-CC-1-P  
Sem-1-Core Course-1 Practical | Word Processing, Spreadsheet, Presentation and Web design by HTML/ PHP | 40 hours | 02 |

**CMS-G-CC-1-1-TH: Computer Fundamentals and Digital Logic Design**  
**Core Course- 1: Theory: 60 Hours**

**Group A: Computer Fundamentals**

**General Concepts:**  
Introduction to Computer and Problem Solving: Information and Data  
Hardware: CPU, Primary and Secondary storage, Cache Memory, I/O devices, Bus structure, BIOS  
Software: Systems and Application.  
Generation of Computers: Super, Mainframe, Mini and Personal Computer, Work stations, Parallel machines (concept only).  
Introduction to Programming Languages: Machine Language, Assembly Language, High Level Language.  
Problem Solving: Flow Charts, Decision Tables and Pseudo codes.  
System Software: Classifications- Operating Systems (OS); Translators – Compilers and Interpreters, Preprocessors, Assemblers, Loaders, Linkers, Line and Screen Editors, other utilities.  
Virus: Concept, Detection and Protection  
Multimedia: Basic Concept, associated hardware and software  
Object Oriented Paradigm: Basic characteristics, Definition, Brief comparison with other types of programming paradigms.

**Group B: Digital Logic Design** (40 hours)

**Number Systems and Codes:**  
Number representation: Weighted Codes, Non-weighted codes, Positional, Binary, Octal, Hexadecimal, Binary Coded Decimal(BCD), Conversion of bases. Complement notions. Binary Arithmetic, Binary Codes: Gray, Alphanumeric, ASCII, EBCDIC; Single Error-Detecting and Correcting Codes, Hamming Codes, Fixed point, Floating point representation.

**Boolean Algebra:**  
Fundamentals of Boolean Algebra, Switches and Inverters, Functionally Complete Gates (AND, OR, NOT), NAND, NOR, Switching function and Boolean Function. De Morgan’s Theorem, Min-term, Max term, Truthtables and minimization of switching function upto four variables, Algebraic and K-map method of Logic circuit synthesis, two-level and multi-level.
Digital Electronics: (24hours)

Combinational Circuits: Realization of AND and OR Gates using diodes and NOT Gate using transistors, Standard Gate Assemblies, IC chips packaging nomenclature, Half and Full Adder(3 & 4 bit), Multi-bit adders – Ripple carry and Carry Look Ahead Adder, Adder/subtractor, BCD-Adder, Data selectors/multiplexers – expansions, reductions, function realization, universal function realization, multi-function realization, Decoders: function realization, De-multiplexer and function realization, Encoder, Priority Encoder, Parity bit Generator/checker, Gray Code Generator, Code Converters, Keyboard encoder, Seven segment display unit, Comparators.

CMS-G-CC-1-1-P: Word Processing, Spreadsheet, Presentation and Web design by HTML/PHP

Core Course- 1: Practical: 40 Hours

Word Processing: (05 hours)
Document creation, saving, editing; Formatting text and paragraphs; header and footers; clipart, tables; tools, Inserting images, files; mail merge; margins; Hyphenation; page setups; OLE; index and references; comments; templates; macros.

Spreadsheet: (05 hours)
Workbook, worksheets, cell; address; entering, editing, formatting ,filtering, sorting worksheet data; printing; charts; functions and formulas; macros; importing , exporting files;

Presentation: (05 hours)
Slides; formatting; wizard, layout; word art; animation.

Web Design: (25 hours)
Web page design can be taught in the laboratory classes by using HTML or PHP.

Text/ Reference Books:
2. Digital Systems - Principle & Applications, Tocci&Widmer, EEE.
5. Digital Design, Mano, PHI.

CMS-G-CC-2-2-TH: Algorithms& Data Structure
Core Course-2: Theory: 60 hours

**Introduction:** Algorithms, ADT. (04 hours)

**Arrays:** (10 hours)
One dimensional and Two Dimensional Arrays, Row Major and Column Major Forms.

**Linked List:** (16 hours)
Singly and Doubly Linked List; Operations Like Insertion, Deletion. Searching.

**Stacks and Queues:** (16 hours)
Concepts of Stack and Queue; Insertion and Deletion of Elements; Array and Linked Representation: Prefix, Infix and Postfix Notation; Postfix Expression Evaluation, Infix to Postfix.

**Searching:** (04 hours)
Algorithm of Sequential, Binary Search Techniques.

**Sorting:** (10 hours)
Bubble Sort, Selection Sort, Insertion Sort, Quick Sort, Merge Sort, Heap Sort.

CMS-G-CC-2-2-P: Programming with C
Core Course-2: Practical: 40 hours

**Basic Structure:** Character set, keywords, identifiers, constants, variables and type declaration. Sample programs, preprocessor.

**Operators:** Arithmetic, Relational, Logical, Assignment, Increment and Decrement, Conditional, comma; operator precedence and associativity; arithmetic expression-evaluation and type conversion. Character I/O, Escape sequence and formatted I/O.

**Branching and Looping:** if, if-else, while, do-while, for.

**Arrays:** One-dimensional and 2-dimensional. Different types of uses. String handling with arrays – read and write, concatenation, comparison, string functions.
User defined functions: Need; Call by Reference and Call by value; return values and types; nesting of functions; recursion.

Structures: Initialization; arrays of a structure, arrays within structures, structure within structure, size of structures, Dynamic Storage Allocation.

Pointers: Declaration and initialization; operators; pointer arithmetics; accessing variables, pointer & arrays, strings, functions, Linked lists, concepts and use in C with different examples.

File handling: Opening & Closing, I/O.

Other Features: Bit level operations, macro definitions, union, command line arguments

Text/ Reference Books:
2. Data Structure, Ellis Horowitz and SartazSahani, Galgotia.
5. Programming in C, E. Balagurusamy, TMH.

**CMS-G-CC-3-3-TH: Computer Organization**

**Core Course-3: Theory: 60 hours**

**Basic Computer Organization:** (15 hours)
IAS Computer, Von Neumann Computer, System Bus. Instruction Cycle, Data Representation, Machine instruction and Assembly Language, CPU Organization: Arithmetic and Logic Unit, Control Unit, CPU Registers, Instruction Registers, Program Counter, Stack Pointer. CISC & RISC processors.

**Instruction:** (02 hours)

**Control Unit:** (05 hours)
Control Structure and Behaviour, Hardwired Control and Micro programmed Control: Basic Concept, Parallelism in Microinstruction.

**ALU:** (10 hours)
Basic Structure of ALU, Addressing mode, Instruction Formats, Handling of interrupts and subroutines, Combinational ALU, 2’s Complement Addition, Subtraction Unit, Booth’s Algorithm for multiplication and division.

**Memory:** (15 hours)
Types of Memory, RAM, ROM, EPROM, EEPROM, DRAM, SRAM, SAM, PLA. Different storage technology; Memory Hierarchy: CPU Register, Cache Memory, Primary Memory, Secondary Memory and Virtual Memory.

**I/O:** (08 hours)
Polling, Interrupts, DMA, I/O Bus and Protocol, Memory mapped I/O and I/O mapped I/O system organization and interfacing, Bus: SCSI, PCI, USB, Bus arbitration.

**Computer Peripherals:** (05 hours)
VDU, Keyboard, Mouse, Printer, Scanner etc.

**Text/Reference Books:**
1. Computer Architecture and Organizations, J.P. Hayes, TMH.
2. Computer System Architecture, M. Morris Mano, PHI.
CMS-G-CC-3-3-P: Programming using Python  
Core Course- 3: Practical: 40 hours  
Open Source Computer Programming Language Python

Planning the Computer Program: (02 hours)  
Concept of problem solving, Problem definition, Program design, Debugging, Documentation.

Techniques of Problem Solving: (02 hours)  
Flowcharting, decision table, algorithms, Structured programming concepts, Programming methodologies viz. top-down and bottom-up programming.

Overview of Programming: (02 hours)  
Structure of a Python Program, Elements of Python

Introduction to Python: (04 hours)  
Python Interpreter, Using Python as calculator, Python shell, Indentation, Atoms, Identifiers and keywords, Literals, Strings, Operators (Arithmetic operator, Relational operator, Logical or Boolean operator)

Creating Python Programs: (20 hours)  
Input and Output Statements, Control statements (Branching, Looping, Conditional Statement, Exit function, Difference between break, continue and pass.), Defining Functions, default arguments.

Iteration and Recursion: (10 hours)  
Conditional execution, Alternative execution, Nested conditionals, Return statement, Recursion, Stack diagrams for recursive functions, Multiple assignment, while statement, for statement.

Strings and Lists: (15 hours)  
String as a compound data type, Length, Traversal and the for loop, String slices, String comparison, A find function, Looping and counting, List values, Accessing elements, List length, List membership, Lists and for loops, List operations, List deletion.

Object Oriented Programming: (05 hours)  
Introduction to Classes, Objects and Methods.

CMS-G-CC-4-4-TH: Operating System
Core Course- 4: Theory: 60 hours

System Software: (03 hours)
Introduction: Different System Softwares

Introduction to Operating Systems: (15 hours)
What is OS? User mode, Kernel mode, Mode Switching, Multiprogramming, Multitasking OS, Concepts of processes, Files, Shell, System calls, Time sharing systems, Types of operating systems: Operating systems for personal computers & workstations.

Concepts of Synchronization: (10 hours)
Critical Regions, Semaphores, Monitor Inter Process Communication Mechanism.

Processor Management: (07 hours)
Scheduling and its types, Priority Queue; Deadlock: Definition, Prevention, Avoidance, Detection, Recovery.

I/O Management: (08 hours)
Device and Device Controllers, Interrupt Handlers and Device drivers.

Memory Management: (10 hours)
Logical & Physical memory, Contiguous allocation, Paging, Segmentation, Swapping, Real and Virtual memory, Page Replacement Techniques.

File Systems: (07 hours)
Files and Directories, File Servers, Security and Protection.

CMS-G-CC-4-4-P: Shell Programming (Unix/ Linux)
Core Course- 4: Practical: 40 hours

Shell Programming: Concept and simple programming problems. Linux system calls, IPC problems, use of semaphore for synchronization problems.

Communication and Network: (30 hours)

Introduction: Components, Uses, Application

Network Hierarchy: LAN, MAN, WAN; Topology;

Reference Model: ISO-OSI and TCP/IP; Functionalities of each layer, Comparison between two models.

Data and Signals (Analog and Digital): Periodic & Non-periodic signals, FDM, TDM, Bandwidth, Bit Rate, Baud Rate, Bit Length, and Composite Signal.

Transmission Media: Transmission Spectrum, Guided (Twisted Pair, Coaxial, Optical Fiber) and Unguided (Radio Wave, Microwave, Infrared, and Satellite Communication: Geostationary, Low Orbit and VSAT).

Transmission Impairments: Noise, Distortion and Attenuation.

Digital Transmission: Line Coding (NRZ, NRZ-L,NRZ-I, RZ, Manchester, Differential Manchester); Block Coding (Basic Idea); Code Modulation (PCM, DM), Concepts of ADSL Modem.

Analog Transmission: Shift Keying (ASK, FSK, PSK, QPSK, QAM);

Multiplexing: FDM, TDM, WDM.

Internet: (10 hours)

Bridges, Routers, Modem, Connectivity concept, DNS, URL, ISDN, WWW, Browser, IP Address, E-mail: Architecture and services, Voice and Video conferencing, Internet service providers, ADSL.

Text/ Reference Books:
1. Data Communication and Networking, B.A. Forouzan, TMH.

Introduction: (12 hours)
Defining System, open and closed system, modeling of system, Communication system, Software life cycle, Different Models: Classical and Iterative Waterfall Model; Spiral Model and its importance towards application for different system representations, Comparative Studies

**Software Requirement and Specification Analysis:** (08 hours)
Requirements Principles and its analysis principles; Specification Principles and its representations

**Software Design Analysis:** (08 hours)
Different levels of DFD Design, Physical and Logical DFD, Use and Conversions between them, Process Representation – Pseudo English, Tight English, Decision Tables and Trees, Structured analysis – Structure Chart Conversion from DFD: Transform Centric and Transaction Centric conversions algorithms, Coupling and Cohesion of the different modules

**Software Cost Estimation Modeling:** (06 hours)
Heuristic and Empirical Modeling; COCOMO

**Software Testing:** (04 hours)
Software Verification and Validation; Testing objectives, Testing Principles, Testability; Error and Faults; Unit Testing, White Box and Blank Box Testing, Test Case Design: Test Vector, Test Stub

**Software Quality Assurances:** (02 hours)

**Text/ Reference Books:**
1. Fundamentals of Software Engineering, Rajib Mall, PHI.
2. Software Engineering, Pressman.

**CMS-G-SEC-B-X-1-TH: Multimedia and its Applications**
**Skill Enhancement Course – B (SEC-B-1): Choice-1: Theory: 40 hours**

**Multimedia System:** (10 hours)
An overview of multimedia system and media streams, Source representation and compression techniques text, speech and audio, still image and video.

**Multi-modal Communication:** (10 hours)
Video conferencing, networking support.

**Multimedia OS:** (20 hours)
Synchronization and QoS, Multimedia Servers.

**Text/ Reference Books:**
1. Multimedia: Making it work, Tay Vaughan, TMH.
CMS-G-SEC-B-X-2-TH: Information Security
Skill Enhancement Course – B (SEC-B-2): Choice-2: Theory: 40 hours

Overview
Overview of Security Parameters: Confidentiality, Integrity and availability-security violation, OSI security architecture.

Cryptography
Mathematical Tools for Cryptography, Symmetric Encryption Algorithm, Theory of Block cipher design, Risk assessment, Network security management, Firewalls, Web and wireless security management, Computer security log management, IT security infrastructure, Operating system security, user security, program security

Finite Field and Number Theory:
Groups, Rings, Fields-Modular, Prime numbers, Fermat's and Euler's Theorem, Chinese remainder Theorem, Discrete Logarithm.

Internet Firewalls for Trusted System:
Roles of Firewalls, Firewall related terminology, Types of Firewalls, Firewall designs,

E-Mail, IP & Web Security (Qualitative study)
E-mail Security: Security Services for E-mail-attacks possible through E-mail, Pretty Good S/MIME.

Text/ Reference Books:
Semester – V & VI

Discipline Specific Elective Courses (DSE-A & B): Choices: Semesters-5&6

<table>

CMS-G-DSE-A-5-1-TH: Database Management System

Discipline Specific Elective Course – A (DSE-A-1): Choice-1: Theory: 60 hours

**Introduction:** (10 hours)
Drawbacks of Legacy System; Advantages of DBMS; Layered Architecture of Database, Data Independence; Data Models; Schemas And Instances; Database Languages; Database

**ER Model:** (10 hours)
Entity, Attributes and Relationship; Structural Constraints; Keys; ER Diagram of Some Example Database; Weak Entity Set; Symbolic Conventions; Specialization and Generalization; Constraints of Specialization and Generalization; Aggregation.

**Relational Model:** (10 hours)
Basic Concepts of Relational Model; Relational Algebra; Tuple Relational Calculus; Domain Relational Calculus.

**Integrity Constraints:** (10 hours)
Domain Constraints, Referential Integrity, Assertions, Triggers.

**Relational Database Design:** (20 hours)
Problems of Un-Normalized Database; Functional Dependencies, Derivation Rules, Closure Of FD Set, Membership Of A Dependency, Canonical Cover; Decomposition to 1NF, 2NF, 3NF Or
BCNF Using FD; Lossless Join Decomposition Algorithm; Dependency preservation.

CMS-G-DSE-A-5-1-P: Database Design and Application
Discipline Specific Elective Course – A (DSE-A-1): Choice-1: Practical: 40 hours

SQL: Basic Structure, Data Definition, Constraints and Schema Changes; Basic SQL Queries (Selection, Insertion, Deletion, Update); Order by Clause; Complex Queries, Aggregate Function and Group by Clause; Nested Sub Queries; Correlated Sub Queries; Views (Insert-Able and Updatable), Joined Relations; Set Comparisons (All, Some); Derived Relations Etc; Grant and Revoke, Transaction in SQL.

PHP Programming Lab

Text/ Reference Books:

Discipline Specific Elective Course – A (DSE-A-2): Choice-2: Theory: 60 hours

Concepts: (20 hours)
Difference with procedure oriented programming, Data abstraction and Information Hiding: Objects, Classes and Methods, Encapsulation, Inheritance, Polymorphism,

Object Oriented Programming through C++: (40 hours)
Input/ Output, Function and Operator Overloading, Constructors and Destructors, Copy Constructors and Assignment Operator, Overloading, Single and Multiple Inheritance, Polymorphism and Virtual Functions.

CMS-G-DSE-A-5-2-P: Object Oriented Programming by C++ / Java
Discipline Specific Elective Course – A (DSE-A-2): Choice-2: Practical: 40 hours

Object Oriented Programming Lab. by using C++ / Java

Text/ Reference Books:
1. Object Oriented Programming with C++, Balagurusamy, TMH.
2. Effective Java by Joshua Bloch, Publisher: Addison-Wesley.

CMS-G-DSE-A-5-3-TH: Sensor Network and IoT
Discipline Specific Elective Course – A (DSE-A-3): Choice-3: Theory: 60 hours

Introduction to Wireless sensor networks (02 hours)
Definition and background, challenges and constrains.
Node architecture (10 hours)
Sensing subsystem, The processor subsystem, communication interface.

Operating System (05 hours)
Functional aspects, non-functional aspects.

Basic Architectural framework
Physical Layer (12 hours)
Basic components, source coding, channel encoding, Modulation and signal properties.

Medium Access control (08 hours)
Wireless MAC protocols, characteristics of MAC protocols in sensor networks, contention free MAC protocols.

Network layer (03 hours)
Data centric routing, proactive routing and on-demand routing, hierarchical routing, location based routing.

Node and network Management (10 hours)
Power Management: local power, Dynamic power, conceptual architecture. Time synchronization: clock and synchronization problem, Time synchronization & Protocols:

Security (qualitative discussion only.) (10 hours)
Fundamental of network security, challenges in wireless sensor networks, protocols and mechanisms in wireless sensor networks.

4. IOT fundamentals, David, Pearson Education.
5. Internet Of Things by Tripathy and Anuradha, CRC Press.

CMS-G-DSE-B-6-1-TH: Embedded Systems
Discipline Specific Elective Course – B (DSE-B-1): Choice-1: Theory: 60 hours

Introduction to 8051: (10 hours)
Overview of Microcontroller, Memory, I/O interface
Intel Microcontroller 8051: Architecture, Peripheral Interface Controller (PIC).

Assembly Language Programming: (10 hours)
Instruction set, Addressing Modes, Jump, Loop and Call instructions, I/O Manipulation, Serial communication, Arithmetic and logical instructions.

Introduction to Embedded System Programming: (20 hours)
Data types and time delays, I/O programming, Logic operations, Data conversions, Data serialization, Interrupt programming, LCD and Keyboard interfacing, ADC, DAC, sensors interfacing, interfacing 8255, I/O interfacing for 8051, interfacing 8255, 8257, 8259/ 8279, ADC, DAC.

**Hardware Description Language (VHDL):**  
Basic Terminology, Entity Declaration, Architecture body, Configuration and package declaration, Package body, Model analysis and Simulation.

**CMS-A-DSE-B–6-1-P: Embedded Systems Lab.**  
DSE-A: Choice-3: Practical: 02 Credit: 40 hours

**Practical:** Sample practical problems can be included related to theory.  
1. Assembly Language Programming related to Microcontroller 8051.  
2. VHDL programs for construction and simulation of various digital circuits.

**Text/Reference Books:**  
4. A VHDL Primer, J. Bhasker, Prentice Hall

**CMS-G-DSE-B-6-2-TH: Operation Research**  
Discipline Specific Elective Course – B (DSE-B-2): Choice-2: Theory: 60 hours

**Introduction:**  
(05 hours)  
Origin and development of operation research, Nature and characteristic features, models in O.R.

**Linear Programming Problem:**  
(05 hours)  
Introduction, mathematical formulation of the problem.

**Simplex Method:**  
(20 hours)  
Introduction, computational procedure, artificial variable, problem of degeneracy.

**Duality:**  
(10 hours)  
Concept, formulation of primal – dual, duality and simplex method, DualSimplex method.

**Transportation Problem**  
(05 hours)  
Introduction, mathematical formulation, finding initial basic feasible solution, optimality, degeneracy.

**Game Theory:**  
(10 hours)  
Some basic terminology, Two-person Zero-sum Game, Game without Saddle Point – Mixed strategy, Algebraic method for 2×2 Game

**Network Scheduling**  
(05 hours)  
Introduction, Critical Path Method (CPM).
CMS-A-DSE-B-6-2-P: Operation Research (O.R.) Lab. using C/ Python
DSE-B: Choice-2: Practical: 02 Credit: 40 hours
Lab sessions related to Theory.

Text/ Reference Books:

CMS-G-DSE-B-6-3-TH: Computational Mathematics
Discipline Specific Elective Course – B (DSE-B-3): Choice-3: Theory: 60 hours

Errors: (05 hours)
Introduction, Types of errors

Interpolation: (05 hours)
Newton Forward and Backward Interpolation.

System of Linear Equations: (10 hours)
Properties: linear dependency, Rank, Singularity of coefficient matrix, Solution methods: Gaussian Elimination, Gauss-Jordan Elimination.

Solution of Non-linear Equations: (10 hours)
Bisection algorithm, Newton-Raphson method.

Integration: (10 hours)
Trapezoidal and Simpson’s 1/3rd Rules and their composite forms

Graph Theory: (concept only) (20 hours)
Basic Terminology, Models and Types, Multi graphs and Weighted graphs, Graph Representation, Graph Isomorphism, Connectivity, Euler and Hamiltonian Paths and Circuits, Planar Graphs, Graph Coloring, Trees, Basic Terminology and properties of Trees.

CMS-G-DSE-B-6-3-P: Computational Mathematics Lab.
Discipline Specific Elective Course – B (DSE-B-3): Choice-3: Practical: 40 hours
Lab. based on the Graph theory and Numerical Methods using C/ Python.

Text/ Reference Books:
   3. Graph Theory With Applications To Engineering And Computer Science by NarsinghDeo, PHI.
   4. Introduction to Graph Theory by D B West, 2nd edition, Pearson Education
